# Assignment: Users (Shell)

Objectives:

- Practice using the Django Shell to run ORM commands to manipulate our database

---

Create a new project called *single_model_orm* with an app called *users_app*. Using the following ERD, complete the tasks listed below:

1. Create a model called User following the ERD above
2. Create and run the migration files to create the User table in your database
3. Create a .txt file where you'll save each of the queries you'll run in the shell
4. Run the shell and import your User model
5. Query: Create 3 new users
6. Query: Retrieve all the users
7. Query: Retrieve the last user
8. Query: Retrieve the first user
9. Query: Change the user with id=3 so their last name is Pancakes.
10. Query: Delete the user with id=2 from the database
11. Query: Get all the users, sorted by their first name
12. BONUS Query: Get all the users, sorted by their first name in descending order
13. Submit your .txt file that contains all the queries you ran in the shell
